

ADVANCES IN IMMUNOLOGY VOLUME 49, Volume 49

Advances in Immunology presents reviews of various topics in immunology. It not only serves to keep investigators informed, but also to unify the concepts underlying this diversified yet technically specialized subject. The volumes in this series contain reviews on different aspects of immunology, broadly defined so as to include such subjects as immunochemistry, antibody synthesis, biological actions of antibodies, immunological unresponsiveness, mechanisms in innate and acquired immunity not involving antibodies and specialized immunological techniques. The articles stress fundamental concepts, but at the same time evaluate experimental approaches. Each volume of Advances in Immunology contains a subject index as well as the contents of recent volumes. Each chapter includes references.
