

## From Pink to Green: Disease Prevention and the Environmental Breast Cancer Movement (Critical Issues in Health and Medicine)

From the early 1980s, the U.S. environmental breast cancer movement has championed the goal of eradicating the disease by emphasizing the importance of reducing even eliminating exposure to chemicals and toxins. From Pink to Green chronicles the movements disease prevention philosophy from the beginning. Challenging the broader cultural milieu of pink ribbon symbolism and breast cancer awareness campaigns, this movement has grown from a handful of community-based organizations into a national entity, shaping the cultural, political, and public health landscape. Much of the activists everyday work revolves around describing how the so called cancer industry downplays possible environmental links to protect their political and economic interests and they demand that the public play a role in scientific, policy, and public health decision-making to build a new framework of breast cancer prevention. From Pink to Green successfully explores the intersection between breast cancer activism and the environmental health sciences, incorporating public and scientific debates as well as policy implications to public health and environmental agendas.
